

### GAMAJET'S DIRECTIONAL SPRAY PATTERN

With Gamajet's unique impingement cleaning pattern, each Gamajet efficiently and rapidly scours every square inch of your tank with a minimum of effluent. Full 360° spherical cleaning automatically scrubs off heavy soils, with no hazards to personnel.

### Gamajet beats every other tank cleaning method hands down

Compared to any other cleaning method, Gamajet impingement cleaning offers an unmatched combination of thorough cleaning, speed, economy, efficient use of cleaning material, and safety. In every case, Gamajet is better, faster, more economical, and safer than other cleaning methods. Put the power of Gamajet to work in your operation and see the benefits firsthand.

- 360° Directional Cleaning Patterns (180° patterns are available)
- Thorough scouring pattern ensures complete reliable cleaning
- Type 316 Stainless Steel construction
- Fluid driven, no external motor
- Can be modified for CIP applications
- Fast, low cost, reliable operation
- Sealed gearbox design interlocking gears
- No time-wasting adjustments or disassembly

# Cleaning Machines

## Gamajet IV-GT

The most powerful Gamajet — perfect for cleaning oversized tanks and vessels. Capable of high concentration chemical recirculation cleaning or high pressure-low volume water jet scrubbing in fixed CIP automated systems.

## Gamajet V

The patented Gamajet V's compact size readily passes through a three inch opening, making it ideal for cleaning small tanks, vats and vessels. A choice of nozzle sizes, turbines and gear speeds offers a broad range of flow rates, pressures and wash cycle times.

## Directional Units

The Gamajet IV, Gamajet V, and Gamajet VIII Directional Cleaning machines are designed specifically for cleaning all types and sizes of open-topped vats, tanks, and vessels. These versatile units provide 180° rotary impingement cleaning to easily clean the sides and bottom of virtually any size application.

## Gamajet Aseptic VI

Designed for permanent installation and to provide true germ- and bacteria-free cleaning for the beverage, food, pharmaceutical and personal care industries. The design completely eliminates all areas for potential bacteria growth, making it ideal for sanitary cleaning applications.

## Gamajet VI

The Gamajet VI is patented and represents the first and only fluid-driven, non lubricated and validatable method for reliably cleaning smaller process vessels. The unit incorporates design features that minimize leakage and ensure that up to 97% of the cleaning solution passes through the unit and is utilized in the cleaning process.

## E-Z VII Barrel Blaster

An easy one step method of cleaning small vessels. With a simple insertion through any 1 1/2" opening, the Gamajet E-Z VII can deliver "like new" cleaning in under two minutes. The Gamajet E-Z VII will typically produce 1/5th, or less, effluent than a spray ball system.

# Cleaning Machines

## Gamajet E-Z VIII

Designed to provide the same flow as traditional largescale tank cleaners, but in a much smaller self-contained unit. The E-Z VIII is lighter, shorter and narrower than any other fluid driven system with similar flow characteristics. Its compact size and light weight allows easier handling and maneuverability while still maintaining the flow rates to clean larger tanks.

*The Gamajet E-Z VIII provides the perfect alternative for safely and easily cleaning manholes, lift stations and wet wells.*

## Tote Blaster™

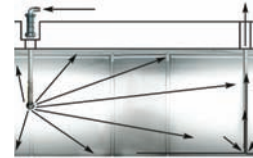

## Gamajet IX

An innovative machine for the fast and economical cleaning of totes and tanks used in the transportation of bulk materials. It features a minimum of parts along with increased durability. The Gamajet IX has a wide range of pressure and flow, and can be used at high pressure and low flow. Its versatile design makes the IX an ideal solution for many applications.

## Gamajet X

The first, and only, cleaning machine capable of getting 100% of residual fuel, dirt and sludge out of underground storage tanks. The adjustable lance or flexible hose insertion kit perfectly positions the Gamajet X through a standard 4" opening for effective cleaning.

*The powerful rotary jets break up dirt and sludge that can be easily vacuumed away.*

## Tank Cleaning While Fuel Polishing

*The Gamajet X can also be used with existing pressurized fuel polishing systems to clean the UST during the polishing process. With the X you can actually clean the fuel tank while polishing the fuel at the same time.*

*There IS a way to clean Underground Storage Tanks*

## Alpha FP

The Alpha FP effectively cleans tank interiors while polishing the fuel — in the field! It has enough power to clean 100% of the interior yet is small enough to fit into the fuel tank.

# Cleaning Machines

Better ways to clean your barrels that make all other cleaning methods obsolete.

## HD Barrel Blaster

The HD BB is the strongest and most durable barrel cleaning machine ever made — guaranteed. Its heavy-duty construction provides 3 times longer service life than the best existing machine. The unit's larger gear train remains outside the barrel to prevent damage. The HD BB is fluid driven and exceptionally efficient — applying all its flow to cleaning, not powering the machine. It is useable with all rack and storage systems.

## All-In-One Flex

Clean your stacked or racked barrels without moving them, with no drainage. Incorporating a specially designed All-In-One, flexible vacuum assembly and a custom machined vacuum head, the AIO Flex provides easy insertion into barrels stacked more than two high in either racks or pyramids.

## All-In-One

Combines high performance impingement cleaning with integrated vacuum extraction, which allows barrels to be easily cleaned and emptied from the top. The unit applies 100% of the water flow to cleaning — not in powering the unit itself. With a single insertion of the easily handled unit, 100% cleaning effectiveness, along with complete liquid extraction, is assured. Ideal for 55 gallon closed top drums.

## Evacu-Blast

Everything you need to clean and empty your barrels is packaged in a convenient transport cart. With the Evacu-Blast you can achieve rapid cleaning and turnaround of your stacked barrels without the need to unstack or move them.

## Gamavac

Self-contained vacuum system that is easily incorporated with your existing cleaning fluid supply. It can be used to empty the wine from your barrels and will extract the lees and then the waste cleaning solution concurrently with the wash cycle. A handy transport cart houses the vacuum unit and all necessary hoses and fittings, and is easily moved directly to the barrel racks.

# Systems

## Portable Restroom Cleaning System

This patented portable system allows for hands-off cleaning of portable restrooms and their holding tanks — all with the door closed. Accommodates both yard and field service locations.

## PTC

### PTC – Portable Tank Cleaner

A portable cleaning system containing everything needed to clean all sizes of tanks and totes on site. Features unmatched cleaning effectiveness combined with unbeatable convenience.

*Shown with optional holding tank cart*

### MCIP – Mobile CIP System

A portable CIP system that eliminates the necessity of piping a permanent CIP installation to each of your tanks. MCIP combines, pump, hoses inlet adapters, filters and a choice of instrumentation sealed within a stainless steel housing.

## Gamajet 88

The only cleaning system available that can ensure complete interior cleaning of any size OTR food grade tanker. Using two specially positioned Gamajet E-Z VIII cleaning machines, the 88 ensures a 90 degree angle of impingement at the bulkheads for best cleaning effect. The Gamajet 88 eliminates residual materials and the potential for bacterial growth.

*Clean 100% of OTR tanker interiors — including the bulkheads.*

**Put the force where the problem is!**

*The manway adapter is a separate item.*

## Blast Station

A stationary system designed specifically for cleaning totes and other portable vessels. Allows you to quickly and easily handle your cleaning in-house.

# Systems

## AlphaJet FP

Clean smaller tanks — up to 1250 gallons — and remove contamination from new fuels. Ideal for home heating, farm, backup generator, fleet lot or portable fueling tanks. Able to fit into a standard opening, the AlphaJET FP rids tanks of existing contamination or remedy issues caused by new fuel formulation. With gas-driven or electric motors, the system can be used in any location. Also available is a Mega Jet version, for larger tanks.

**AlphaJETFP**  
by GAMAJET

## Cart KlenzR

Put rotary impingement cleaning inside any sized refuse cart for fast, hands-free cleaning. Use the basic Cart KlenzR with existing hot water sources. Available in single or dual station models that provide everything needed for simple bin cleaning.

# Accessories

## Tripod

For temporary mounting of your Gamajet in a fixed location.

## E-Z VII – HD BB Filter

Ensures a constant supply of clean water to your cleaning machine.

## Bipod

A perfect complement to the Gamajet HD BB for cleaning wine barrels.

## Manway Adapter

Designed for easy insertion into manways, the unit seals and prevents splash-out during cleaning.

## Steam Pump

Perfect for providing hot wash fluid on demand at flow rates of up to 130 gpm.

## Sanitary Inlet Connectors

For use when sanitary mounting is required, these connections use Tri-Clamp fittings to mount to the vessel.

## Portable Cart

When an application calls for a temporary-mobile-mounting arrangement, the cart will easily roll your Gamajet to the desired cleaning location.

## Validator

For applications that require 100% assurance that the Gamajet Cleaning Machine is functioning.

## Maintaining your Gamajet prevents outages, delays and saves \$\$\$!

Periodic maintenance keeps the world's best cleaning machine performing at its peak, while significantly extending its service life.

You can make the repairs yourself with our detailed instructions, or have a Gamajet Technician do it for you.

Gamajet Technicians completely disassemble, inspect, replaced damaged or worn parts, reassemble and test operating conditions of your machine before shipping it back to you the **very next day!**

***1-year warranty with every repair!***
